

Callander carbon pathways
Notes on Appendices

1. Callander Moderate Pathway

- shows projected emissions (CO₂e) between 2010 and 2025
- numerically and as a series of bar charts, broken down by emission source
- also shown is the index of percentage emission reduction, by total and source
- housing and public building emissions are split by gas and electricity
- as the grid energy input changes, so will the emissions associated with Callander's electricity consumption

2. Callander Carbon Pathways

- shows projected emissions (CO₂e) between 2010 and 2025
- numerically and as line charts, showing slow, moderate and fast emission trajectories against the Scottish carbon reduction targets
- graphs are shown as the index against the 2010 baseline and, secondly, reduction from that baseline
- percentages are highlighted for 2020 and 2025
